Office of President
University of California
Oakland CA 93012

Dear Office of President,

I am graduate student in Computer Science at California State University, Channel Islands (CSUCI) and I am writing to apply for the position as IT Infrastructure Services Student Intern. I learned about this job opportunity from CSUCI Dolphin CareerLink (university job portal).

I consider this position as a great opportunity to not only add valuable experience and skill to my existing toolbox but also envision it as first step towards becoming systems administrator later in my career. I am eager to learn all the nuances related to IT Infrastructure/IT Operations from the team and seniors. This semester, I am studying Cloud Computing where we get to utilize/orchestrate IT resources over the Internet. My past work experience involved writing application software, authoring software documentation and in few cases helping operations team with application delivery on linux - ubuntu/debian machines. I am good at navigating through file system with bash, dual booting linux/windows, installing binaries, basic administration, and diagnosing network connectivity issues as they arise. Sound knowledge of virtualization technologies like KVM, VMWare ESX, and Xen.

I truly believe that the combination of my extensive background, education, supervision merged with enthusiasm to learn will allow me to be an ideal fit for the above position at University of California, Office of President.

I would be happy to discuss this position further with either a phone or in-person interview. Please reach me at (805) 444-9850 or at rihanstephen.pereira576@myci.csuci.edu, and I look forward to speaking to you soon.

Thank you for your time and consideration.

Sincerely yours,

Rihan Pereira
